

Claim 2 has not been changed by this amendment and remains as follows:

2. The method according to Claim 1, comprising the steps of:

- generating a patient code for at least one patient on whom at least one analysis is to be carried out and storing said patient code in a data processing system;
- placing a biological specimen from said patient in said at least one container;
- carrying out at least one analysis of said specimen in at least one analyzer, the analyzer reading the identification code of said container and entering into said data processing system the results of the analysis combined with the identification code of said container;
- using said data processing system to associate the results of the analysis or analyses with the patient code, and then with the patient identified by said patient code, by means of the combination of the patient code with the identification code.

Please amend claim 3 as follows:

3. (AMENDED) The method according to Claim 1, in which said identification code is placed on the corresponding container in a machine readable format.

Please amend claim 4 as follows:

4. (AMENDED) The method according to Claim 1, in which said identification code is placed on the corresponding container at the time of the production or packaging of the container.

[ Please amend claim 5 as follow: ]

5. (AMENDED) The method according to Claim 1, in which said patient code is placed on a medium in a machine-readable format.

[ Claim 6 has not been changed by this amendment and remains as follows: ]

6. (AMENDED) The method according to Claim 3, in which the combination of the patient code with the identification code is generated by the sequential reading by an automatic reading instrument of the patient code and the identification code, or vice versa.

*Q. ent*  
[ Please amend claim 7 as follows: ]

7. (AMENDED) The method according to Claim 1, in which said patient code and said identification code are reproduced as bar codes and are optically read to produce said combination.

[ Please amend claim 8 as follows: ]

8. (AMENDED) The method according to Claim 1, in which said patient code is generated by a central computer of said data processing system; the combination of the patient code with the identification code is carried out by means of a unit of said data processing system other than said central computer; and the result of the analysis, associated with the patient code, is sent to said central computer.

[ Please amend claim 9 as follows: ]

9. (AMENDED) The method according to Claim 1, in which said patient code is generated by a central computer of said data processing system; the combination of the patient code with the identification code is carried out by means of a unit of said data processing system other than said central computer; and the result of the analysis, associated with the identification code of the containers, is sent to said central computer, the central computer being programmed to associate with the result of the analysis the data relating to the patient to whom said result relates.

*Amend*  
[ Claim 10 has not been changed by this amendment and remains as follows: ]

10. A data processing system for data management in an analytical laboratory, comprising, in combination,

- a central electronic computer, for acquiring the data on patients on whose biological specimens the analyses are to be carried out, and for generating a patient code for each patient acquired;
- means for acquiring an identification code associated with each container of a plurality of containers for laboratory analysis of biological specimens;
- means for combining each of said acquired identification codes with a corresponding patient code;
- at least one analyzer with means for reading identification codes associated with the containers which are placed in it, said analyzer carrying out at least one analysis on a biological

specimen contained in the containers placed in it and supplying to said electronic computer the result of the analyses carried out, combined with data capable of associating said result with the patient to whom the biological specimen belongs.

[ Claim 11 has not been changed by this amendment and remains as follows: ]

11. The system according to Claim 10, comprising means for receiving from said at least one analyzer the result of said at least one analysis combined with the identification code of the container in which the analyzed biological specimen is placed, said means being programmed to associate said result with the patient code relating to the identification code combined with the result of the analysis, to send the result of the analysis combined with the patient code to said central electronic computer.

[ Claim 12 has not been changed by this amendment and remains as follows: ]

12. The system according to Claim 10, in which the result of the analysis, combined with the identification code of the corresponding container, is sent to said central computer, the central computer being programmed to associate, by means of the combination of the patient code with the identification code, each identification code - and consequently the result of the analysis - with the patient code of the patient whose biological specimen is contained in the container identified by said identification code.

[ Claim 13 has not been changed by this amendment and remains as follows: ]

13. A container for laboratory analysis of biological specimens, characterized in that it is provided with a unique machine-readable identification code.

☐ Claim 14 has not been changed by this amendment and remains as follows: ☐

14. The container according to Claim 13, characterized in that said identification code is applied to said container during the production of the container.

*Amend*  
☐ Please amend claim 15 as follows: ☐

15. (AMENDED) The container according to Claim 13, characterized in that said identification code is a bar code.

☐ Please amend claim 16 as follows: ☐

16. (AMENDED) The container according to Claim 13, characterized in that it includes means for determining an expiry date.

☐ Claim 17 has not been changed by this amendment and remains as follows: ☐

17. A set of containers for laboratory analysis of biological specimens, characterized in that each of said containers has a unique identification code which is different from the identification codes of the other containers of said set and is machine-readable.

☐ Claim 18 has not been changed by this amendment and remains as follows: ☐

18. The set of containers according to Claim 17, characterized in that said identification code is applied to said containers during the production of the containers.

☒ Please amend claim 19 as follows:

19. (AMENDED) The set of containers according to Claim 17, characterized in that said identification code is a bar code.

☒ Please amend claim 20 as follows:

20. (AMENDED) The set of containers according to Claim 17, characterized in that each container is provided with means for determining an expiry date.

#### REMARKS

Claims through are in this application and are presented for consideration. Claims through have been amended. The amended claims present the same subject matter as the original claims but have been amended to adapt them to the U. S. style. The new claims present subject matter similar to the original claims, but in a different form.

The specification and claims have been amended in order to place this application in better form. The reference to claims in the specification has been deleted or amended. Appropriate headings have been added. No new matter has been added.
